DETAILED ACTION

Response to Amendment

1. Applicant's submittal of a preliminary amendment was received January 6, 2004, wherein claims 1-22 were cancelled and new claims 23-29 were added.

Specification

2. The abstract of the disclosure does not commence on a separate sheet in accordance with 37 CFR 1.52(b)(4). A new abstract of the disclosure is required and must be presented on a separate sheet, apart from any other text.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 23, 26-27 and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Beck (US Patent 2,405,636). Beck discloses a hauler vehicle (10) for mining operations comprising a vehicle frame (11) coupleable with a source of motive power (45); and a conveyor (20) centrally disposed and coupled with the vehicle frame, wherein the vehicle frame and conveyor define a receiving end and a discharge end (See Fig. 1), and wherein the discharge end has a substantially fixed height (the specification does not disclose the discharge end of the

Art Unit: 3618

conveyor being height adjustable); [claim 26] wherein the discharge end comprises a discharge boom integrated into the vehicle frame defining a one-piece frame construction (the drawings and specification does not disclose the discharge end of the conveyor being height adjustable, so Examiner has construed Beck's vehicle as only having a one-piece frame construction).

Regarding claims 27 and 29, under the principles of inherency, if a prior art device, in its normal and usual operation, would necessarily perform the method claimed, then the method claimed will be considered to be anticipated by the prior art device. When the prior art device is the same as a device described in the specification for carrying out the claimed method, it can be assumed the device will inherently perform the claimed process. *In re King*, 801 F.2d 1324, 231 USPQ 136 (Fed. Cir. 1986). In this case, Applicant has only claimed the method of constructing a hauler vehicle possessing all the components set forth in the previous apparatus claims, therefore, Beck inherently teaches constructing a hauler vehicle having the claimed components.

5. Claims 23-24 and 27-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Brasher (US Patent 4,576,107). Brasher discloses a hauler vehicle (10) for mining operations comprising a vehicle frame (12) coupleable with a source of motive power (this in an inherent component because without a source of motive power the vehicle could not operate); and a conveyor (50) centrally disposed and coupled with the vehicle frame, wherein the vehicle frame and conveyor define a receiving end (14) and a discharge end (16), and wherein the discharge end has a substantially fixed height (The discharge end is adjustable, however, it remains at a fixed height set by the operator); [claim 24] further comprising a full load indicator mechanism (See Figs. 2-3 and column 3, lines 10-27) at least partially adjacent the discharge end, the full load indicator mechanism providing an indication when the conveyor is substantially full.

Application/Control Number: 10/751,432

Art Unit: 3618

Regarding claims 27 and 28, under the principles of inherency, if a prior art device, in its normal and usual operation, would necessarily perform the method claimed, then the method claimed will be considered to be anticipated by the prior art device. When the prior art device is the same as a device described in the specification for carrying out the claimed method, it can be assumed the device will inherently perform the claimed process. *In re King*, 801 F.2d 1324, 231 USPQ 136 (Fed. Cir. 1986). In this case, Applicant has only claimed the method of constructing a hauler vehicle possessing all the components set forth in the previous apparatus claims, therefore, Brasher inherently teaches constructing a hauler vehicle having the claimed components.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brasher (US Patent 4,576,107) in view of Butler et al. (US Patent 5,873,431). Brasher discloses the hauler vehicle as set forth above including a motor, but does not disclose wherein the source of motive power comprises the motor connected to a vehicle-mounted battery. Butler et al. discloses a hauler vehicle wherein the source of motive power comprises a motor (26) connected to a vehicle-mounted battery (27). At the time of the invention, it would have been obvious to a person of ordinary skill in this art to provide a vehicle mounted battery to supply electricity to

the motor disclosed in Brasher in view of the teaching of Butler et al. The motivation for doing so would have been to allow the vehicle to be completely autonomous, so that a separate electric power source is not needed to be connected to the hauler vehicle to provide electrical power for the motors.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yale (US Patent 4,291,777), Russell (US Patent 2,192,650), Lee (US Patent 2,599,061), Osgood (US Patent 2,634,008) and Frey et al. (US Patent 4,556,117) are relied on to show a mining shuttle car.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. Allen Shriver whose telephone number is (703) 308-1224. The examiner can normally be reached on Mon-Thurs 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris P. Ellis can be reached on (703) 305-0168. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
